

WASHINGTON STATE DEPARTMENT OF
Natural Resources

Geoduck Aquaculture Survey

The Washington State Department of Natural Resources is coordinating a Pilot Project to determine the feasibility of geoduck aquaculture on the tidelands and submerged lands that DNR manages in Puget Sound as a public trust. This activity is separate from the subtidal wildstock fishery managed by the State, and would be an expansion of current DNR shellfish aquaculture leasing activities.

As part of the Project, we are asking people who might be affected by geoduck aquaculture operations what they think. Thank you for taking the time to give us your thoughts.

1. Do you live, work, or own property on a salt waterfront? ? yes ? no What county do you live in?_____
2. Have you ever engaged in aquaculture? ? yes ? no If yes, what was your experience in obtaining permits? Positive? Negative?
3. Are you aware of any geoduck aquaculture on beaches you regularly view or visit? ? yes ? no
4. If yes, what is your impression of this activity?

(OVER)

5. What would you want DNR to consider before allowing geoduck aquaculture on state-owned aquatic lands?

6. What is your opinion about geoduck aquaculture on state-owned tidelands & submerged lands?
